AREAS OF EXPERTISE

TRAINING & INDUSTRY EXPERIENCE

CONTACT

About the Trainer

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte. Ltd.

ROLE

Principal Trainer, Tertiary Infotech Academy Pte. Ltd.

CERTIFICATION

Industry certified in the subject area of this course.

DELIVERS

Professional short courses for Tertiary Infotech Academy.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

Let's Know Each Other

1 Your name and organisation / role.

2 Your experience with this subject (if any).

3 What you want to be able to do after this course.

Ground Rules

1

Set your mobile phone to silent mode.

2

Participate actively — no question is too small.

3

Mutual respect: agree to disagree.

4

One conversation at a time.

5

Be punctual; return from breaks on time.

6

Learn by doing — try every hands-on lab.

Download Course Material

Portal: <https://lms-tms.tertiaryinfotech.com>

Lesson Plan — 1 Day, 8 hours/day

Day 1

- Day 1 — Enable Copilot and prepare data, build and refine reports with prompts, then add AI-assisted analysis and share
 - Topic 1: Get Started with Copilot in Power BI (Labs 1–3)
 - Topic 2: Create Reports and Visuals with Copilot (Labs 4–6)
 - Topic 3: AI-Assisted Data Modeling and Analysis (Labs 7–9)

Day 1

- Day 1 — Enable Copilot and prepare data, build and refine reports with prompts, then add AI-assisted analysis and share
 - Topic 1: Get Started with Copilot in Power BI (Labs 1–3)
 - Topic 2: Create Reports and Visuals with Copilot (Labs 4–6)
 - Topic 3: AI-Assisted Data Modeling and Analysis (Labs 7–9)
- Daily timing
 - 9:30am–6:30pm · 1-hour lunch · tea breaks within training time

Learning Outcomes

1

Understand & enable

Explain what Copilot for Power BI and Microsoft Fabric are, and confirm the licensing and settings needed to enable Copilot.

2

Prepare & prompt

Connect and prepare data so that Copilot can interpret it, and write effective prompts in Power BI Desktop and the Service.

3

Generate & refine

Generate complete report pages and visuals from prompts, then refine their type, layout and formatting with Copilot.

4

Narrate & format

Add narrative visuals and AI summaries, and apply storytelling and formatting best practice to a report.

5

DAX with Copilot

Generate and explain DAX measures with Copilot to answer business questions.

6

Q&A in plain English

Set up Q&A and natural-language queries so users can ask questions of the data in plain English.

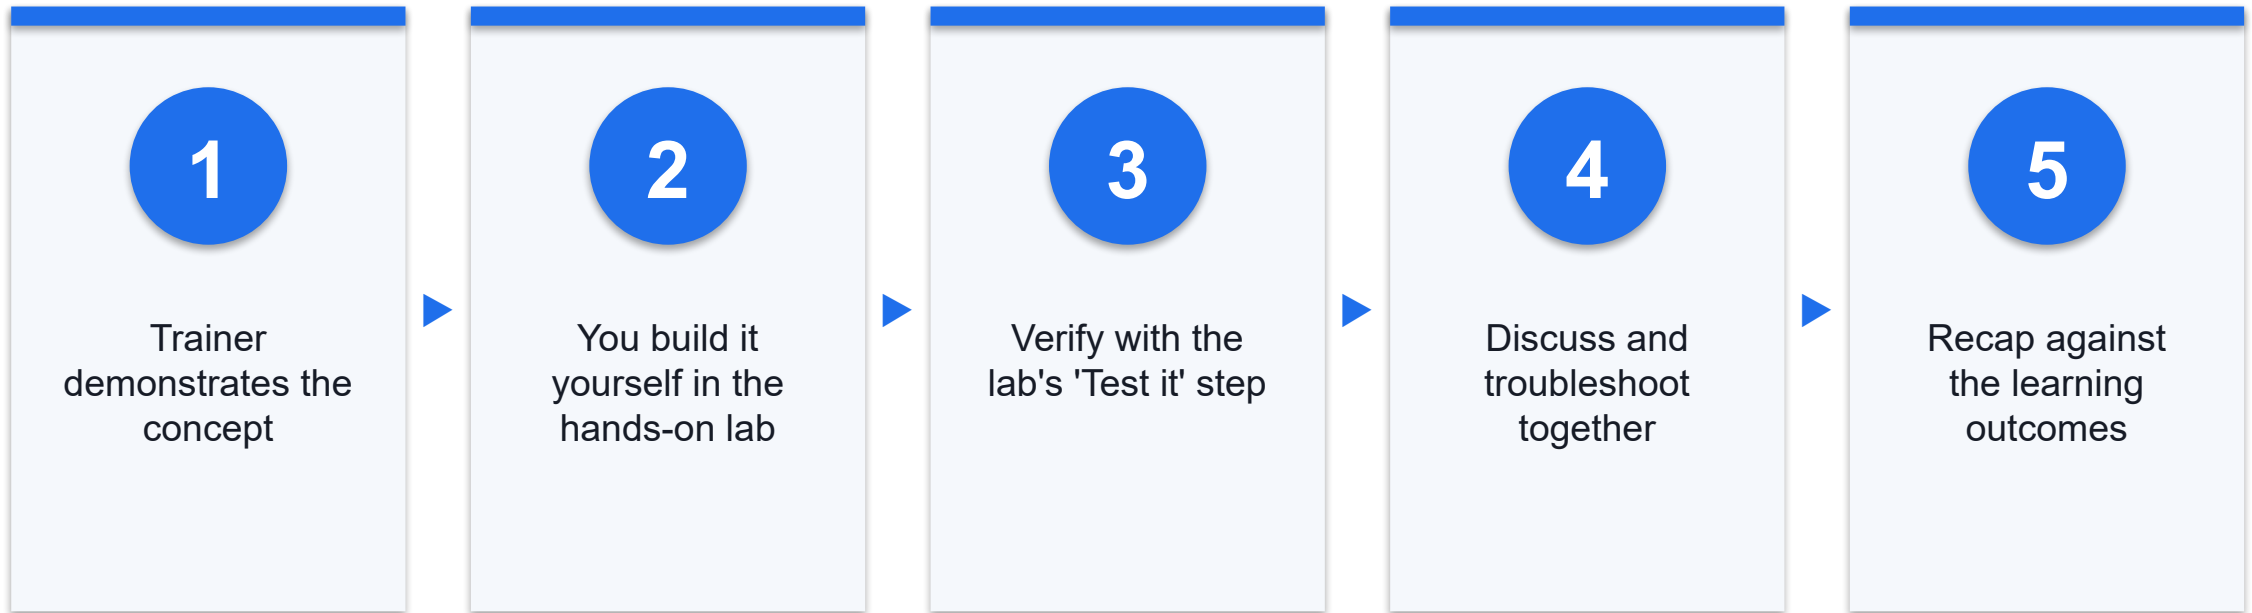

Learning Outcomes (cont.)

7

Summarise & share

Summarise insights, answer business questions, and publish and share an AI-assisted report and dashboard.

How You'll Learn

CORE CONCEPTS

Course Fundamentals

What Copilot for Power BI Really Is

1

From clicks to prompts — you describe the report you want in plain language and Copilot drafts it for you.

2

It works where you work — the Copilot pane sits inside Power BI Desktop and the Power BI Service.

3

It runs on Fabric — Copilot needs a paid Fabric or Premium capacity with the tenant switch enabled.

4

You stay in control — Copilot proposes pages, visuals and measures; you review and keep only what is right.

The Copilot-in-Power-BI Loop

1

Prepare

Give Copilot a clean model — clear names, correct types, valid relationships.

2

Prompt

State the fields, the metric, the breakdown and the intent in plain language.

3

Generate

Copilot drafts the page, visual, measure or summary.

4

Review

Check the result against the data and the business question.

5

Refine

Re-prompt, edit and format until the report is right, then share it.

THE DESIGN RULE

Copilot is only as good as the model you give it and the prompt you write.

This course is hands-on: you prepare data, prompt Copilot for pages, visuals, DAX and summaries, review every result, and publish an AI-assisted report you can trust and share.

What You'll Build

A Copilot-ready model

- Copilot enabled on a Fabric capacity
- A clean, well-named dataset
- Correct types and relationships

An AI-generated report

- Report pages built from prompts
- Refined visuals and layout
- Narrative visuals and AI summaries

AI-assisted analysis

- DAX measures written and explained by Copilot
- A configured Q&A experience
- Natural-language answers

How Every Lab Works

1

The trainer demonstrates the Copilot technique on the shared Contoso Coffee report.

2

You do it yourself in Power BI on your own data (or the supplied Contoso Coffee sample).

3

You verify the result against the lab's explicit 'Test it' check.

4

You review what Copilot produced and re-prompt or edit until it is correct.

5

You keep the page, visual or measure — it becomes part of your growing report.

TOPIC 01

Get Started with Copilot in Power BI

What Copilot & Fabric are · Licensing & enabling · Desktop vs Service · Effective prompting · Preparing data

Key Concepts — Get Started with Copilot in Power BI

1

Copilot for Power BI — an AI assistant, built on Microsoft Fabric, that turns plain-language prompts into report pages, visuals, DAX and summaries.

2

Microsoft Fabric — the unified data platform Copilot runs on; Power BI is the reporting workload within it.

3

Licensing and requirements — Copilot needs a paid Fabric capacity (F2 and above) or Power BI Premium, plus the tenant admin switch turned on.

4

Enabling Copilot — a tenant admin enables Copilot in the Fabric admin portal; the report must sit on a supported capacity in a supported region.

5

Copilot in Desktop vs the Service — Desktop authors the model and report locally; the Service (app.powerbi.com) shares, and the Copilot pane appears in both.

6

The Copilot pane — a chat-style panel where you ask for pages, visuals, measures and summaries in everyday language.

Key Concepts — Get Started with Copilot in Power BI (cont.)

7

Effective prompting — a good prompt names the fields, the metric, the breakdown and the intent, not just 'make a chart'.

8

Preparing data for Copilot — clear table and column names, correct data types and relationships let Copilot understand your model.

9

You stay in control — Copilot proposes; you review every page, visual and measure before you keep it.

Hands-On Labs — Get Started with Copilot in Power BI

Lab 1

- Enable Copilot and Set Up Your Power BI Environment

Lab 2

- Connect and Prepare Data So Copilot Can Understand It

Lab 3

- Write Effective Prompts in Power BI Desktop and the Service

Enable Copilot and Set Up Your Power BI Environment

LAB 1

This lab gets Copilot working before you rely on it. You confirm your workspace is on a Copilot-enabled Fabric or Premium capacity, check the tenant switch is on, and open the Copilot pane in both Power BI Desktop and the Power BI Service so you know where you will be working. Nothing here changes data — it is a setup and verification lab. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A confirmed Copilot-enabled environment: Power BI Desktop signed in, a workspace on a supported capacity, and the Copilot pane visible in the Service.

Tools: Power BI Desktop, Power BI Service, Microsoft Fabric capacity, Fabric admin portal (tenant switch), Copilot pane

Enable Copilot and Set Up Your Power BI Environment

STEP 1 OF 8

Open Power BI Desktop and sign in (Home > Sign in) with the work or school account you will use for the course.

Enable Copilot and Set Up Your Power BI Environment

STEP 2 OF 8

2

In a browser, open app.powerbi.com and sign in with the same account. Confirm you can see the workspace your trainer has placed on the lab capacity.

Enable Copilot and Set Up Your Power BI Environment

STEP 3 OF 8

3

Open that workspace and check its capacity: Workspace settings > License info should show a Fabric capacity (F2 or above) or Premium — this is what Copilot requires.

Enable Copilot and Set Up Your Power BI Environment

STEP 4 OF 8

4

Understand the tenant switch (admin context only): Copilot must be enabled in the Fabric admin portal under Tenant settings > Copilot and Azure OpenAI. Your trainer confirms this is on for the lab tenant.

Enable Copilot and Set Up Your Power BI Environment

STEP 5 OF 8

5

In the Service, open the workspace and look for the Copilot button in the ribbon or toolbar. If it is greyed out or missing, tell the trainer — it depends on the capacity and the tenant switch.

Enable Copilot and Set Up Your Power BI Environment

STEP 6 OF 8

6

Back in Power BI Desktop, note where Copilot appears (Home ribbon > Copilot) — you will use it once a model is loaded in the next lab.

Enable Copilot and Set Up Your Power BI Environment

STEP 7 OF 8

7

Write down, in one line, the two things Copilot needs to be available: a supported paid capacity, and the tenant switch turned on.

Enable Copilot and Set Up Your Power BI Environment

STEP 8 OF 8

Confirm you have changed no data — this lab only verifies access. You are now ready to load the dataset.

Enable Copilot and Set Up Your Power BI Environment

Test it

You are signed in to Power BI Desktop and the Service with the same account, your workspace is on a Fabric/Premium capacity, and the Copilot button is visible (not greyed out) in the Service.

Connect and Prepare Data So Copilot Can Understand It

LAB 2

Copilot is only as good as the model you give it. In this lab you load the sales data, clean it in Power Query, rename cryptic columns into business terms, set correct data types, and confirm the relationships between your tables. A tidy, well-named model is what lets Copilot answer 'sales by region' correctly in the labs that follow. BUILDING BLOCK — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A clean Contoso Coffee model in Power BI Desktop: well-named tables and columns, correct data types, and valid relationships — ready for Copilot.

Tools: Power BI Desktop, Get Data, Power Query Editor, data types, Model view, relationships

Connect and Prepare Data So Copilot Can Understand It

STEP 1 OF 9

In Power BI Desktop, choose Home > Get data > Excel workbook (or Text/CSV) and load the supplied Contoso Coffee dataset — or your own sales data.

Connect and Prepare Data So Copilot Can Understand It

STEP 2 OF 9

2

In the Navigator, select the Sales table (and any Products, Regions and Dates tables) and click Transform data to open Power Query rather than loading blindly.

Connect and Prepare Data So Copilot Can Understand It

STEP 3 OF 9

3

In Power Query, rename cryptic columns to business terms: for example col_amt to Sales Amount, reg to Region, prod to Product. Clear names are how Copilot maps prompts to fields.

Connect and Prepare Data So Copilot Can Understand It

STEP 4 OF 9

4

Set each column's data type correctly: Sales Amount and Quantity as numbers, Order Date as date, Region and Product as text. Wrong types break Copilot's charts and DAX.

Connect and Prepare Data So Copilot Can Understand It

STEP 5 OF 9

5

Remove obvious noise: use Remove Rows > Remove Blank Rows and filter out any test or total rows that should not be in the detail data.

Connect and Prepare Data So Copilot Can Understand It

STEP 6 OF 9

6

Click Close & Apply to load the shaped tables into the model.

Connect and Prepare Data So Copilot Can Understand It

STEP 7 OF 9

7

Open Model view and confirm the relationships: Sales should relate to Products, Regions and Dates on their key columns. Create any missing relationship by dragging key to key.

Connect and Prepare Data So Copilot Can Understand It

STEP 8 OF 9

8

Give the tables friendly names too (for example Sales, Product, Region, Calendar) and hide any technical key columns you do not want Copilot to surface.

Connect and Prepare Data So Copilot Can Understand It

STEP 9 OF 9

A green circle with a white number 9 inside, indicating the current step in the process.

Save the file as Contoso Coffee.pbix — this single file grows into your finished report across the remaining labs.

Connect and Prepare Data So Copilot Can Understand It

Test it

Your model loads without errors, every column has a business-friendly name and correct data type, the Sales table is related to Product, Region and Calendar, and the file is saved as Contoso Coffee.pbix.

Write Effective Prompts in Power BI Desktop and the Service

LAB 3

An agent is only as good as its prompt. With your clean model loaded, you open Copilot and compare a vague request with a specific one, see the difference in the result, and distil what worked into a reusable prompt pattern — Metric, Breakdown, Filter, Intent — that you will use for every prompt from here on, in both Desktop and the Service. BUILDING BLOCK — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A reusable four-part prompt pattern and one strong, tested prompt saved for reuse, run in both Power BI Desktop and the Service.

Tools: Power BI Desktop, Power BI Service, Copilot pane, prompt design

LAB 3

Write Effective Prompts in Power BI Desktop and the Service

STEP 1 OF 8

1

In Power BI Desktop with Contoso Coffee.pbix open, click Home > Copilot to open the Copilot pane on your model.

LAB 3

Write Effective Prompts in Power BI Desktop and the Service

STEP 2 OF 8

2

Run a deliberately vague prompt and note how generic the result is.

\$ Show me the data.

Write Effective Prompts in Power BI Desktop and the Service

STEP 3 OF 8

3

Now run a specific prompt for the same intent and compare — it should be sharper and directly useful.

\$ Show total Sales Amount by Region as a bar chart, sorted from highest to lowest, for the last 12 months.

Write Effective Prompts in Power BI Desktop and the Service

STEP 4 OF 8

4

Write down the four parts that made the second prompt work: the Metric, the Breakdown, the Filter, and the Intent (the chart or answer you want).

Write Effective Prompts in Power BI Desktop and the Service

STEP 5 OF 8

5

Capture your reusable prompt pattern so every future prompt follows it.

\$ METRIC: <what to measure> | BREAKDOWN: <by which field> | FILTER: <time / segment> | INTENT: <chart, table or summary>

Write Effective Prompts in Power BI Desktop and the Service

STEP 6 OF 8

6

Try one more, changing only the breakdown, to feel how Copilot responds to precise fields.

\$ Show total Sales Amount by Product for this year as a column chart, top 10 products only.

Write Effective Prompts in Power BI Desktop and the Service

STEP 7 OF 8

Publish the report to your lab workspace (Home > Publish) and open it in the Service, then open Copilot there to confirm the pane works in both places.

Write Effective Prompts in Power BI Desktop and the Service

STEP 8 OF 8

8

Note one difference you observe between Copilot in Desktop and in the Service, and save your best prompt where you can find it again for the next topic.

Write Effective Prompts in Power BI Desktop and the Service

Test it

You can show two results for the same intent (vague vs specific), a written four-part prompt pattern, and the same specific prompt working in both Power BI Desktop and the Service.

Recap — Get Started with Copilot in Power BI

1

You can now: Confirm the licensing and tenant settings Copilot needs, and verify the Copilot pane appears in Power BI Desktop and the Service.

2

You can now: Load the Contoso Coffee dataset, shape it in Power Query, and give tables and columns clear names, correct types and relationships so Copilot can interpret the model.

3

You can now: Open the Copilot pane on your model and write clear prompts that name the fields, metric, breakdown and intent, comparing a vague prompt with a specific one.

TOPIC 02

Create Reports and Visuals with Copilot

Generating pages from prompts · Refining visuals & layout · Narrative visuals & AI summaries · Formatting & storytelling

Key Concepts — Create Reports and Visuals with Copilot

1

Generating report pages — describe the report you want and Copilot builds a full page of related visuals for you to review.

2

Suggested content — Copilot can propose which pages and visuals a dataset supports when you are not sure where to start.

3

Refining visuals — ask Copilot to change a visual's type, swap fields, sort, filter or add a measure without leaving the pane.

4

Refining layout — Copilot can rearrange, align and retheme a page so it reads cleanly on screen and in print.

5

The narrative (smart) visual — a text visual that Copilot writes and keeps updated, explaining what the data shows in words.

6

AI summaries — Copilot summarises a page or a visual into a short, plain-language readout for stakeholders.

Key Concepts — Create Reports and Visuals with Copilot (cont.)

7

Storytelling — order the page top-left to bottom-right, lead with the headline number, and let each visual answer one question.

8

Formatting best practice — consistent titles, number formats, colour and spacing make an AI-generated page look deliberate.

9

Review and refine — every generated page is a first draft; you edit, re-prompt and format until it is right.

Hands-On Labs — Create Reports and Visuals with Copilot

Lab 4

- Generate Report Pages from Prompts

Lab 5

- Refine Visuals and Layouts with Copilot

Lab 6

- Add Narrative Visuals and AI Summaries with Storytelling and Formatting

Generate Report Pages from Prompts

LAB 4

This is where Copilot saves you the most time. You describe the report page you want in plain language and Copilot builds a full page of related visuals — cards, charts and a table — for you to review. You also let Copilot suggest what a dataset supports when you have no starting point. Every generated page is a first draft you will refine next. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A Copilot-generated Sales Overview page in your Contoso Coffee report, plus a second page built from Copilot's own content suggestions.

Tools: Power BI (Desktop or Service), Copilot pane, report page generation, suggested content

Generate Report Pages from Prompts

STEP 1 OF 7

Open Contoso Coffee.pbix (or the published report) and open the Copilot pane. Add a new blank report page and name it Sales Overview.

Generate Report Pages from Prompts

STEP 2 OF 7

2

Ask Copilot to build the whole page from one prompt that names the metrics and breakdowns you want.

\$ Create a Sales Overview page with: total Sales Amount and total Quantity as KPI cards, Sales Amount by Region as a bar chart, Sales Amount by Month as a line chart, and Sales Amount by Product as a table.

Generate Report Pages from Prompts

STEP 3 OF 7

3

Wait for Copilot to generate the page, then read every visual. Confirm the numbers look plausible against what you know of the data.

Generate Report Pages from Prompts

STEP 4 OF 7

4

Where you are unsure what to build, ask Copilot to suggest content the dataset supports.

\$ Suggest report pages and visuals this dataset supports for a sales and operations audience.

Generate Report Pages from Prompts

STEP 5 OF 7

5

Pick one suggestion and have Copilot create it on a new page named Channel & Product.

\$ Create a page showing Sales Amount by Channel as a donut chart and the top 10 Products by Sales Amount as a bar chart.

Generate Report Pages from Prompts

STEP 6 OF 7

6

Rename any auto-generated visual titles that are unclear, so each visual states the question it answers.

Generate Report Pages from Prompts

STEP 7 OF 7

Save the file. You now have two Copilot-generated pages as first drafts.

Generate Report Pages from Prompts

Test it

Your report has a Sales Overview page with KPI cards plus region, month and product visuals, and a second page created from a Copilot content suggestion — all showing correct fields from your model.

Refine Visuals and Layouts with Copilot

LAB 5

A generated page is a starting point. In this lab you refine it with Copilot: change a chart's type, swap or add a field, sort and filter, and then have Copilot align and arrange the visuals so the page reads cleanly. You will alternate between prompting Copilot and nudging visuals by hand — the two work together. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A refined Sales Overview page: correct visual types, sorted and filtered fields, and a clean, aligned layout.

Tools: Power BI (Desktop or Service), Copilot pane, visual formatting, filters, layout

Refine Visuals and Layouts with Copilot

STEP 1 OF 8

1

Open the Sales Overview page from Lab 4. Select the Sales Amount by Month visual and ask Copilot to change its type.

\$ Change the Sales Amount by Month visual to a line and clustered column chart, with Sales Amount as the line and Quantity as the columns.

Refine Visuals and Layouts with Copilot

STEP 2 OF 8

2

Refine a field on the region visual by prompting Copilot to sort and limit it.

\$ Sort the Sales Amount by Region bar chart from highest to lowest and show only the top 5 regions.

Refine Visuals and Layouts with Copilot

STEP 3 OF 8

3

Add a filter through Copilot so the page focuses on the current year.

\$ Filter this page to the current year only.

Refine Visuals and Layouts with Copilot

STEP 4 OF 8

4

Ask Copilot to improve the layout so the page is easy to read.

\$ Arrange this page so the KPI cards are along the top and the charts are aligned in a tidy grid below them.

Refine Visuals and Layouts with Copilot

STEP 5 OF 8

5

Fine-tune by hand: nudge and align a visual using the Format > Align tools, and resize the table so no data is cut off.

Refine Visuals and Layouts with Copilot

STEP 6 OF 8

6

Ask Copilot to apply consistent formatting across the page.

\$ Apply a consistent colour theme and format all Sales Amount values as currency with no decimals.

Refine Visuals and Layouts with Copilot

STEP 7 OF 8

Compare the refined page with the Lab 4 draft and note two things Copilot changed that improved readability.

Refine Visuals and Layouts with Copilot

STEP 8 OF 8

Save the file.

Refine Visuals and Layouts with Copilot

Test it

Your Sales Overview page shows a combined line-and-column month visual, a top-5 sorted region chart, a current-year page filter, currency formatting, and a tidy aligned layout.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

LAB 6

Numbers need words. In this lab you add a narrative visual that Copilot writes and keeps updated, generate an AI summary of the page for stakeholders, and then apply storytelling best practice — headline first, one question per visual, a clean reading order — so the AI-generated content looks deliberate and reads well. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A Sales Overview page with a Copilot narrative visual, a saved AI summary, and a storytelling layout ready to show stakeholders.

Tools: Power BI (Desktop or Service), Copilot pane, narrative/smart narrative visual, AI summary, formatting

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 1 OF 8

On the Sales Overview page, add a narrative visual: Insert > Narrative (or ask Copilot to create it), so Copilot writes a text explanation of the page.

\$ Add a narrative visual that summarises the key sales trends on this page in three short sentences and updates as the data changes.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 2 OF 8

2

Read the narrative and check every claim against the visuals. Re-prompt if it overstates or misreads a trend.

\$ Rewrite the narrative to focus on the top region, the best-selling product, and the month-on-month trend.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 3 OF 8

3

Generate an AI summary of the whole page for a stakeholder who will not open the report.

\$ Summarise this page in five bullet points for a busy executive, leading with the single most important number.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 4 OF 8

4

Copy the AI summary into a text box on the page (or your notes) and label it clearly as an AI-generated summary you have reviewed.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 5 OF 8

5

Apply storytelling order: move the headline KPI to the top-left, arrange visuals so the eye travels left-to-right and top-to-bottom, and make each visual answer one question.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 6 OF 8

6

Apply formatting best practice with a final Copilot prompt.

\$ Give this page consistent titles, currency formatting, aligned spacing and a single colour theme so it looks professional.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 7 OF 8

Do a 60-second test: look away, look back, and check the page's main message lands in under a minute. Adjust the headline if it does not.

LAB 6

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

STEP 8 OF 8

Save the file.

Add Narrative Visuals and AI Summaries with Storytelling and Formatting

Test it

Your page has a Copilot narrative visual whose claims match the visuals, a reviewed AI summary labelled as AI-generated, and a clean storytelling layout that communicates its main message within a minute.

Recap — Create Reports and Visuals with Copilot

1

You can now: Use Copilot to generate a complete report page of related visuals from a single prompt, and to suggest content when you are unsure where to start.

2

You can now: Use Copilot to change visual types, swap and sort fields, apply filters, and tidy the page layout without leaving the pane.

3

You can now: Add a Copilot narrative (smart) visual, generate an AI page summary, and apply storytelling and formatting best practice to the report.

TOPIC 03

AI-Assisted Data Modeling and Analysis

Generating & explaining DAX · Q&A & natural-language queries · Summarising insights · Sharing AI-assisted reports

Key Concepts — AI-Assisted Data Modeling and Analysis

1

DAX with Copilot — describe the calculation you need in words and Copilot writes the DAX measure for you to check and keep.

2

Explaining DAX — paste an unfamiliar measure and Copilot explains, in plain language, what it does and how.

3

Measure hygiene — you still name, format and validate every measure Copilot writes before you trust it in a report.

4

The Q&A visual — lets report users type a question and get an instant visual answer in natural language.

5

Natural-language queries — 'sales by region last quarter' becomes a chart; good field names make the answers accurate.

6

Synonyms and Q&A setup — teach Q&A the words your business uses so questions map to the right fields.

Key Concepts — AI-Assisted Data Modeling and Analysis (cont.)

7

Summarising insights — Copilot turns a report into an executive summary that answers the key business questions.

8

Sharing AI-assisted reports — publish to the Power BI Service, build a dashboard, and share it with the right people.

9

Trust and governance — check accuracy, respect row-level security, and label AI-generated content before you share it.

Hands-On Labs — AI-Assisted Data Modeling and Analysis

Lab 7

- Generate and Explain DAX Measures with Copilot

Lab 8

- Set Up Q&A and Natural-Language Queries

Lab 9

- Summarise Insights and Share Your AI-Assisted Report and Dashboard

Generate and Explain DAX Measures with Copilot

LAB 7

Copilot can write DAX so you describe the calculation in words instead of remembering syntax. In this lab you generate the core measures your report needs — total sales, a prior-period comparison and a percentage — have Copilot explain an unfamiliar measure in plain language, and then do the essential human step: name, format and validate every measure before you trust it. BUILDING BLOCK — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A set of validated DAX measures (Total Sales, Sales YoY %, Average Order Value) written and explained by Copilot, added to your model.

Tools: Power BI Desktop, Copilot pane, DAX measures, measure formatting, validation

Generate and Explain DAX Measures with Copilot

STEP 1 OF 8

1

Open Contoso Coffee.pbix and open Copilot. Ask it to write your base sales measure.

\$ Write a DAX measure called Total Sales that sums Sales Amount from the Sales table.

Generate and Explain DAX Measures with Copilot

STEP 2 OF 8

2

Review the DAX Copilot returns, then create the measure (New measure) and paste it in. Set its format to currency with no decimals.

Generate and Explain DAX Measures with Copilot

STEP 3 OF 8

3

Ask Copilot for a time-comparison measure that depends on your Calendar table.

\$ Write a DAX measure called Sales YoY % that compares Total Sales to the same period last year and returns the percentage change.

Generate and Explain DAX Measures with Copilot

STEP 4 OF 8

4

Ask Copilot for a ratio measure so you can see basket size.

\$ Write a DAX measure called Average Order Value that divides Total Sales by the distinct count of Order ID, handling divide-by-zero safely.

Generate and Explain DAX Measures with Copilot

STEP 5 OF 8

5

Take an unfamiliar measure and have Copilot explain it in plain language so you understand before you keep it.

\$ Explain what this measure does, step by step, in plain language: Sales YoY %.

Generate and Explain DAX Measures with Copilot

STEP 6 OF 8

6

Validate each measure against the data: put Total Sales, Sales YoY % and Average Order Value in a table by Month and sanity-check the numbers against a visual you already trust.

Generate and Explain DAX Measures with Copilot

STEP 7 OF 8

Name and tidy: confirm each measure has a clear name, the right format, and a home table, and hide any helper columns Copilot no longer needs surfaced.

Generate and Explain DAX Measures with Copilot

STEP 8 OF 8

Add the new measures to your Sales Overview KPI cards and save the file.

Generate and Explain DAX Measures with Copilot

Test it

Your model has three correctly named and formatted measures — Total Sales, Sales YoY % and Average Order Value — each validated against the data, and Copilot has produced a plain-language explanation of at least one of them.

Set Up Q&A and Natural-Language Queries

LAB 8

Q&A lets anyone ask the report a question in plain English and get an instant visual. In this lab you add a Q&A visual, ask several questions, then improve the answers by teaching Q&A the words your business actually uses (synonyms) and curating the suggested questions — so a non-technical user gets the right answer first time. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A working Q&A experience on your report: a Q&A visual, tested natural-language questions, and synonyms and suggested questions configured for accuracy.

Tools: Power BI (Desktop or Service), Q&A visual, natural-language queries, Q&A setup (synonyms, suggested questions), Copilot

Set Up Q&A and Natural-Language Queries

STEP 1 OF 8

1

On a new page named Ask the Data, insert a Q&A visual (Insert > Q&A, or ask Copilot to add one).

\$ Add a Q&A visual to this page so users can ask questions about Contoso Coffee sales in natural language.

Set Up Q&A and Natural-Language Queries

STEP 2 OF 8

2

Type a natural-language question and watch Q&A build the answer visual.

\$ sales amount by region last quarter

Set Up Q&A and Natural-Language Queries

STEP 3 OF 8

3

Ask two more, changing the wording, to test how Q&A interprets business language.

\$ top 5 products by total sales this year

Set Up Q&A and Natural-Language Queries

STEP 4 OF 8

4

Find a question Q&A answers poorly because of wording, then teach it a synonym so business terms map to the right field (Modeling > Q&A setup > Field synonyms — for example map 'revenue' and 'takings' to Sales Amount).

Set Up Q&A and Natural-Language Queries

STEP 5 OF 8

5

Re-ask the question using the business word you just mapped and confirm Q&A now answers correctly.

\$ revenue by channel this year

Set Up Q&A and Natural-Language Queries

STEP 6 OF 8

6

Curate the experience: in Q&A setup, review the suggested questions and add three good starter questions users are likely to ask.

Set Up Q&A and Natural-Language Queries

STEP 7 OF 8

7

Use Copilot to propose questions this dataset can answer, and add the best to your suggested questions.

\$ Suggest five natural-language questions a store manager could ask this Contoso Coffee dataset.

Set Up Q&A and Natural-Language Queries

STEP 8 OF 8

8

Save the file. Your report now answers plain-English questions accurately.

Set Up Q&A and Natural-Language Queries

Test it

Your report has a Q&A visual that correctly answers at least three natural-language questions, including one that only works because you added a synonym, plus three curated suggested questions.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

LAB 9

This lab turns your work into a product people use. You have Copilot summarise the whole report into an executive readout that answers the key business questions, publish the report to the Power BI Service, pin visuals to a dashboard, and share it — checking accuracy, respecting row-level security, and labelling AI-generated content before it goes out. This completes your connected Contoso Coffee report. **BUILDING BLOCK** — what you build in this lab is added to your Contoso Coffee report, the single connected dashboard you assemble across all 9 labs.

You'll build

A published, shared AI-assisted Contoso Coffee report: an executive insight summary, a dashboard of pinned visuals, and a controlled share — the finished connected project.

Tools: Power BI Service, Copilot pane, publish, dashboards (pinning), sharing, row-level security

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 1 OF 8

Open Copilot on the finished report and ask for an executive summary that answers the business questions the report was built to answer.

\$ Summarise this whole report for the leadership team: the headline sales result, the strongest and weakest regions, the top products, and the year-on-year trend, in one short paragraph and five bullets.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 2 OF 8

2

Read the summary and verify every figure against the report. Place the reviewed summary on an Executive Summary page and label it as AI-generated and reviewed.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 3 OF 8

3

Publish the report from Power BI Desktop to your lab workspace (Home > Publish), or save it in the Service if you built there.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 4 OF 8

4

In the Service, open the report and pin your headline KPI cards and the Sales by Region chart to a new dashboard named Contoso Coffee — Sales.

\$ Pin the Total Sales and Sales YoY % cards and the Sales by Region chart to a dashboard.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 5 OF 8

5

Add a natural-language dashboard tile if available, or use the dashboard Q&A box to add a plain-English tile such as 'sales by month this year'.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 6 OF 8

6

Before sharing, check governance: confirm the figures are accurate, confirm row-level security is applied if the data is sensitive, and confirm AI-generated content is labelled.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 7 OF 8

Share the dashboard with the right people using Share (or by adding them to the workspace with the correct role), granting the least access needed.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

STEP 8 OF 8

Do a final review: open the shared link as the audience would see it and confirm it is correct, readable and safe. Save and keep the finished Contoso Coffee report.

Summarise Insights and Share Your AI-Assisted Report and Dashboard

Test it

Your report is published to the Service with a reviewed, labelled executive summary, a Contoso Coffee — Sales dashboard of pinned visuals exists, and it is shared with the intended audience using least-access, with RLS respected where the data is sensitive.

Recap — AI-Assisted Data Modeling and Analysis

1

You can now: Use Copilot to write DAX measures from plain-language descriptions, explain an unfamiliar measure, then name, format and validate each one.

2

You can now: Add a Q&A visual, ask natural-language questions of the model, and improve accuracy by teaching Q&A synonyms and reviewing suggested questions.

3

You can now: Use Copilot to produce an executive insight summary, publish the report to the Service, pin a dashboard, and share it safely with the right people.

WRAP-UP

Course Summary & Next Steps

What You Achieved

1

Understand & enable

Explain what Copilot for Power BI and Microsoft Fabric are, and confirm the licensing and settings needed to enable Copilot.

2

Prepare & prompt

Connect and prepare data so that Copilot can interpret it, and write effective prompts in Power BI Desktop and the Service.

3

Generate & refine

Generate complete report pages and visuals from prompts, then refine their type, layout and formatting with Copilot.

4

Narrate & format

Add narrative visuals and AI summaries, and apply storytelling and formatting best practice to a report.

5

DAX with Copilot

Generate and explain DAX measures with Copilot to answer business questions.

6

Q&A in plain English

Set up Q&A and natural-language queries so users can ask questions of the data in plain English.

What You Achieved (cont.)

7

Summarise & share

Summarise insights, answer business questions, and publish and share an AI-assisted report and dashboard.

Keep Practising After the Course

1

Re-run the labs on your own machine — repetition is what makes the skills stick.

2

Apply the techniques to a real process or project in your own organisation.

3

Your course material stays available at <https://lms-tms.tertiaryinfotech.com/>.

4

Explore the follow-on courses at www.tertiarycourses.com.sg.

THANK YOU FOR ATTENDING

Thank You!

You now have the practical skills from every lab in this course — keep applying them to your own work.
